Introduction

SAMA Framework

Authlogics Applicable Cyber Security Policies

INTRODUCTION

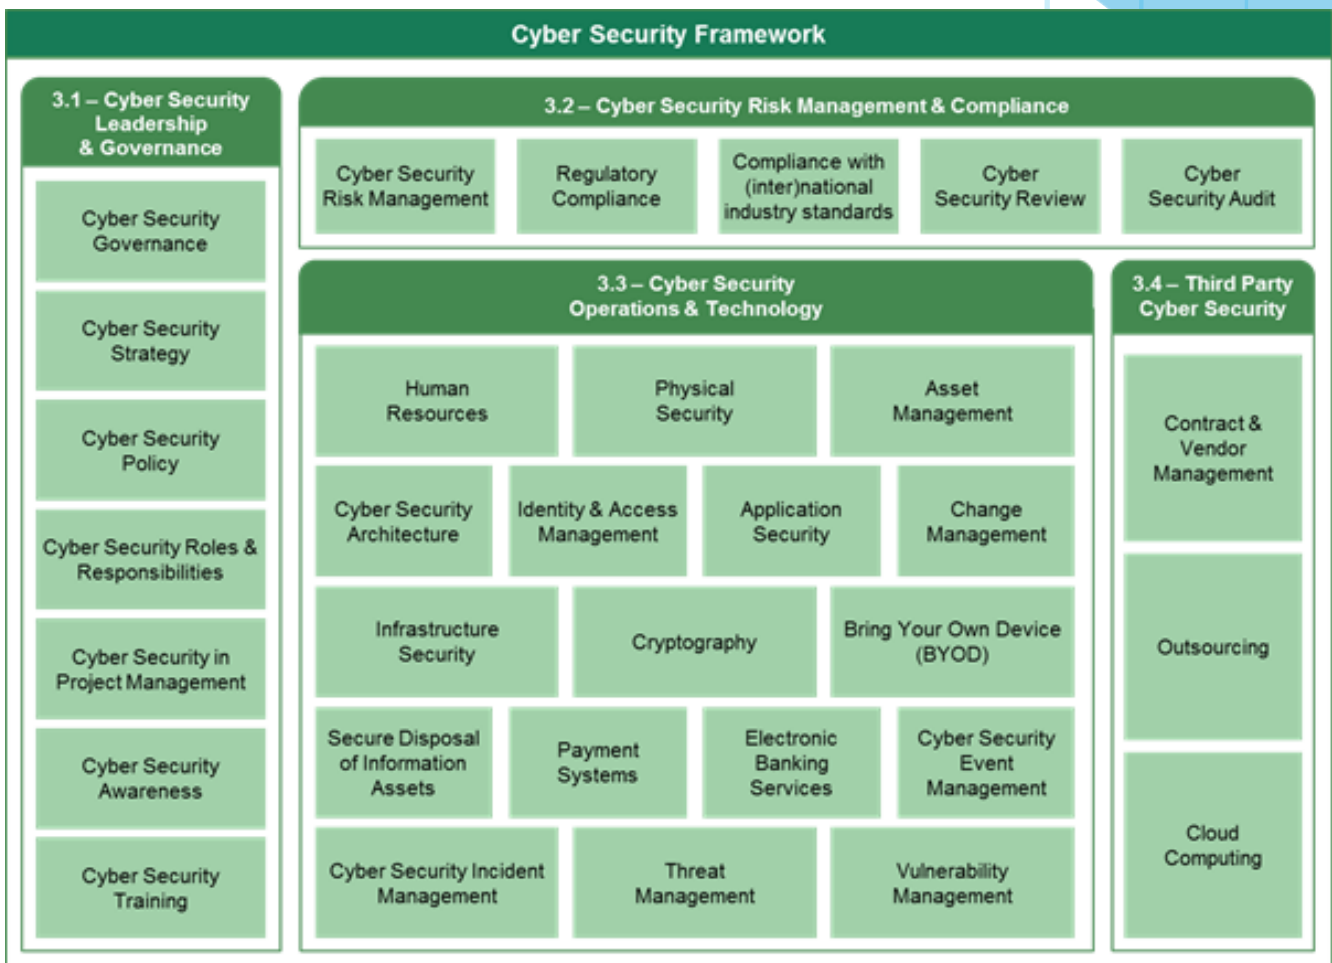

Due to the ever-increasing seriousness of threats that cyber-attacks pose, the Saudi Arabian Monetary Authority (SAMA) introduced the Cyber Security Framework (Framework) to assist regulated entities in their efforts to have an appropriate cyber security plan and assist with the design and building of robust infrastructures including the necessary detective and preventive controls. The Framework articulates what controls are appropriate and provides guidance on how to assess an organisation's maturity level.

The adoption and implementation of the Framework is deemed to be a vital step in ensuring that Saudi Arabian Banking, Insurance, and Financing Companies sectors can manage and withstand cyber security threats. The Framework considers the ways that regulated entities leverage technology and, by adopting a common approach for addressing cyber security, cyber security risks are properly managed throughout all the sectors. The Framework has been drafted to ensure the integrity of the Saudi Financial Sector delivering flawless customer experience, continuous availability of services, and effective protection of sensitive data.

Authlogics is a suite of security solutions that is well-positioned to help achieve SAMA Compliance.

SAMA FRAMEWORK

The figure below illustrates the overall structure of the Framework and indicates the cyber security domains and subdomains, including a reference to the applicable section of the Framework. The highlighted areas are the sections where Authlogics solutions can be used to attain compliance.
